

Meeting Name:

Arctic Ocean and Climate Interactions Planning Meeting

Description:

With the interest in Arctic science increasing, there may be a need for organizations with long standing interests in the Arctic to develop more effective means of communication with each other to avoid overlapping activity and share limited resources as well as to welcome new organizations and ideas into existing structures where possible.

The Climate and Cryosphere Project (CliC) and the International Arctic Science Committee (IASC) would like to take the opportunity of ASSW and ICARP III to bring together organizations, groups and projects working in the Arctic Ocean, particularly those dealing with climate connections and variability. The purpose of this meeting would be for groups to briefly share the projects they are working on and then ultimately to identify areas where increased collaborations may cover identified gaps.

If you are interested in attending, please send a short description of your current project or ideas for new projects to Jenny Baeseman (jenny@climate-cryosphere.org). This information will be circulated to participants prior to the meeting to help shorten 'presentation time' and allow more interactive discussion to take place.

Preferred date: 27 April from 16 to 17:30

Estimated Number of people: 25

Partially closed meeting
